ORGANIC AND INORGANIC IMPURITIES
CABOT AEROGEL PRODUCTS*

Aerogel products are not analyzed for the presence of the following organic and inorganic impurities. To the best of our knowledge, Cabot Corporation believes these chemicals are not present in the raw materials used in manufacture of our aerogel products nor are these substances used in our production and handling processes. Therefore, they are not expected to be present in aerogel products. Aerogel products are inorganic substances.

**Organic impurities:**
- Acrylamide
- Aliphatic and aromatic solvents
- Azo compounds, aromatic amines and dyes
- BADGE, BFDGE and NOGE
- Endocrine disrupters, such as phthalates and bisphenol-A
- Furans
- Glycol ethers
- Halogenated hydrocarbons including, but not limited to, aliphatic chlorinated hydrocarbons, brominated hydrocarbons, dioxins, flame retardants, fluorinated hydrocarbons, of hexachlorobenzene (HCB), tetrachlorophthalic anhydride (TCPA), polyaromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), PCTs, and ozone depleting substances (ODS), such as CFCs and HCFCs
- Hazardous air pollutants (HAPs), as defined by United States regulations and EU directives
- Latex
- Organotin derivatives
- Phenols
- Pesticides, insecticides, fungicides, rodenticides, herbicides and biocides
- Volatile organic compounds (VOCs), as defined by United States regulations and EU directives

**Inorganic impurities:**
- Asbestos
This information is being provided as of the date hereof. Please visit cabotcorp.com/certifications for any updates to this information.

*Includes: translucent aerogel; aerogel beads; fine particle aerogel; and IR opacified aerogel products.
